

# Empowering Smart Logistics

## The art of making things talk

Capture secure and wirelessly relevant data with our conbee Smart TAGs without large infrastructure measures. Find out in real time where your assets are in the process. Visualize all parameters quickly and easily.

With conbee solutions, all objects involved in the production and logistics process can be clearly identified and localized - they can „speak“ and become „Smart Objects“.

Start with us into the world of IoT - from the Proof of Concept to complete roll-outs, conbee is the right partner.

## Your advantages through our solutions

- Transparency in production and intralogistics
- Automatic inventory
- Increase in productivity

We also digitize your processes with modern ultra-low-power wireless technologies such as *Bluetooth*<sup>®</sup> Low Energy (BLE), *LoRa*<sup>®</sup>, *LoRaWAN*<sup>™</sup> and *NB-IoT*. Our IoT modules network your objects from individual areas in the company to complete industrial areas.

Intelligent algorithms and sensors guarantee a cost-efficient, reliable and long self-sufficient Smart TAG runtime.
